Boom Lift Training Vernon

Boom Lift Training Vernon - Aerial platforms or likewise known as elevated work platforms are devices which allow workers to perform tasks and duties at elevated heights that will not be otherwise accessible. There are various aerial lifts on the market to carry out various applications under different site conditions. If operated carelessly, elevated work platforms could cause serious injury or death. The most common reasons for related accidents are electrocution, falls, crushed body parts and tip-overs. Lift operators should be completely trained in techniques in order to prevent accidents during the operation of lifts.

The Aerial Lift Safety program provides needed resources to be able to help individuals required to learn how to operate these devices more effectively. Through the program, participants will be given thorough instruction. Types of lift covered include scissor, articulating and boom supported aerial lifts. The video presents the right procedures operators must follow. Instruction focuses on protection against falls, pre-operational check, stability of the device and safe driving procedures.

The boom lift training course will help to deal with equipment reliability and employee safety, utilizing materials that are fully compliant with your regional and local regulations and requirements. Course management and training methods will be taught. The trainer would likewise know the technical aspects of aerial lift safety.

Parts of the Boom Lift Training program comprise both practical training and classroom training. Both sessions should be completed successfully for the participant to receive a certificate of achievement.

The self-propelled boom-supported elevating work platforms are different from the self-propelled elevating work platforms in that they are able to position their work platforms completely beyond the base of the machine. The theoretical training part is practically the same for both types. The practical part of the training can be completed faster if just one type of machinery is utilized.

Elevating Work Platform Training Program Objectives:

Aerial Platform/Boom Lift Training provides competency requirements for safely operating Boom-Type Elevating Work Platforms and Self-Propelled Elevating Work Platforms (for use on paved/slab surfaces). Training would help operators to efficiently use elevating work platforms while decreasing the possibilities of an expensive accident in the workplace. Trainees will review of applicable regulations and company polices, talk about Due Diligence, study Criminal Negligence and consequences to employers, trainers, employees and supervisors. Participants will review machine features, operating procedures, stability, parking and fueling/charging procedures. Site-specific safety concerns would be addressed.
