

## **Forklift Training School Vernon**

Forklift Training School Vernon - Why A Forklift Operator Needs to Take A Forklift Training School - OSHA and CSA establish criteria for forklift safety training which meets existing standards and regulations. Anyone planning to operate a forklift is needed to successfully finish safety training prior to utilizing whatever kind of forklift. The accredited Forklift Operator Training Program is designed to offer individuals training with the practical skills and information to become an operator of a forklift.

Vehicle and Mobile Equipment safety regulations that apply to forklift use include pre-shift checks, and rules for loading and lifting.

An inspection checklist should be carried out and submitted to the supervising authority before beginning a shift. When a maintenance problem is uncovered, the utilization of the specific equipment should be stopped until the problem has been addressed. To be able to indicate the machinery is out of order, the keys should be removed from the ignition and a warning tag placed in a visible location.

Safety rules for loading will consist of checking the forklift's load rating capacity to know how much the machinery can handle. When starting the machine, the forks must be in the down position. Remember that there is a loss of about 100 pounds carrying capacity for every inch further away from the carriage that the load is carried.

To be able to safely lift a palletized load, drive the forklift to the pallet and stop with the fork three inches from the load. Level the mast until it is at right angles to the load. Lift the forks to an inch underneath the slot on the pallet and drive forward. Then lift forks four inches. Tilt back the load to secure it for moving. Drive the lift backwards if the load obscures frontal vision. Check behind and honk to alert other workers. Never allow forks to drag on the ground.
