Every individual would be tested to make sure they could safely and efficiently utilize your site-specific machine.

Manlift Safety

Manlifts can be really dangerous equipment because they are capable of lifting a worker 20 feet or higher in the air and that creates a particular amount of danger. Since the danger is so apparent, lift owners and operators are careful to correctly maintain their machinery and follow right operating procedures and safety precautions. The ratio of accidents involving this specific equipment is quite low.

The safe operation of the manlift, boom lift and scissor lift is up to the operator of that equipment. They need to know all of the responsibilities that go with running the equipment and how to utilize the lift vehicle safely. The most basic safety features on the machinery are safety decals and the operating manual. These show vital information about the operating procedures, safety machinery and maintenance.

Newer lift models would come together with guidebooks and decals in place. Technically, the operating guidebook should be kept on the lift itself. If you are buying a second-hand lift, it is important to make sure that the manual is included and that important decals haven't been painted over. The restraints which prevent operators from falling and the guardrails are other vital safety features. These are standard and mandatory on all types of lifts.
